

Amendments to the Specification:

Please replace the Abstract with the following:

An imaging device for receiving an input image and producing two size-adjusted output images. The imaging device includes a detector that captures the input image and outputs the captured input image as image data; a first adjuster for performing image size adjustment using a linear interpolation on the image data to produce a first output image that is displayed and outputted; a second adjuster for performing image size adjustment using a curve interpolation on the image data to produce a second output image that is recorded on a recording medium.
